

Andrew Chau

(805) 368-1813 • andrewchau333@gmail.com • chauandrew.github.io

Education:

University of California, Los Angeles

June 2021

BS Computer Science, 3.72 GPA

Skills:

AI: Claude Code, MCP, Agentic Workflows - Claude Code in Action Certified (Anthropic, 2026)

Data: Snowflake, Airflow, ETL pipelines, PostgreSQL, MongoDB, OracleDB

Backend & APIs: Node.js, Spring Boot, Kafka, GraphQL (Apollo Federation)

Languages: Java, TypeScript, JavaScript, SQL, Python, Go

Work Experience:

Gap Year: Took a career break to invest in humanitarian work abroad June 2025 - June 2026

VideoAmp, Intermediate Data Engineer

February 2025 - May 2025

- Built Snowflake and Airflow ETL pipeline powering daily reporting dashboards in Retool to pinpoint data requiring manual reconciliation
- Developed Airflow DAGs to backfill months of historical data, enabling new product launch

Fincons Group

AppleTV+ (client)

Software Engineer I

November 2023 - February 2025

- Architected and deployed a Single Source of Truth metadata platform integrating 7 business systems, enabling real-time data synchronization across all AppleTV+ IT services. Leveraged Apollo Federation to create an extensible GraphQL API with minimal overhead
- Created a hierarchical ID service (Java/Spring, PostgreSQL) to standardize entity identifiers across 7 business systems, enabling reliable cross-system joins
- Designed Kafka-based event-driven pipelines handling 10k+ events/day, enabling scalable asynchronous metadata sync between concurrent services
- Developed and maintained 6 microservices (Node.js, TypeScript, OracleDB) and a Vue.js SPA

Associate Software Engineer

June 2022 - November 2023

- Led development of a multi-tenant notification system with role-based permissions and successfully delivered phase 1 to production
- Implemented secure file attachment feature with versioning and history
- Designed Cypress frontend testing framework and QA best practices for offshore team

3Diligent, Backend Software Engineering Intern

March 2020 - September 2020

- Created dynamic price estimation using historical purchase data
- Built automated, end-to-end API tests using Cucumber to streamline deployments

Miscellaneous:

I boulder v6-7, love baking, and often host events for 50+ college and high school students
